

10 Feb 2023

To Whom It May Concern:

Neha D/o Ram Singasan is on her Polytechnic internship with me, for the project “Automated Red Team Operations” from 5 Sep 2022 till 17 Feb 2023.

During the internship, Neha has demonstrated that she is extremely motivated to excel in what she is tasked to do. She asks sharp questions and is able to come up with a meaningful project scope from the many possibilities. She also demonstrated that she could work independently, with minimal supervision. Not only did she meet the requirements of the project, which was to come up with an attack plan, for the red team operations on the infrastructure as code, she also went further to automate the red team operations, including the automatic escalation of privilege from a user shell, which is not so easily achievable out of the box from the open source tool. This shows that she could perform independent research and is extremely persistent till she achieved her goals.

Not only is she technically proficient, she is also able to articulate her ideas clearly, and she relates well with her colleagues and peers. Already, Neha has shown that she has excellent communication skills, people skills and project management skills. She would likely be able to navigate smoothly between a pure technical role or a managerial/marketing role in future, or even a combination of both.

I wish her all the best in her future endeavours.
